

```

2
3 # Chi-square goodness-of-fit test
4
5 # Observed counts
6 observed <- c(120, 95, 85, 100)
7
8 # Expected probabilities (equal)
9 expected_prob <- rep(1/4, 4)
10
11 # Perform chi-square test
12 test_result <- chisq.test(observed, p = expected_prob)
13
14 # Display results
15 print(test_result)
16

```

```

>
> # Chi-square goodness-of-fit test
>
> # Observed counts
> observed <- c(120, 95, 85, 100)
>
> # Expected probabilities (equal)
> expected_prob <- rep(1/4, 4)
>
> # Perform chi-square test
> test_result <- chisq.test(observed, p = expected_prob)
>
> # Display results
> print(test_result)

```

Chi-squared test for given probabilities

```

data:  observed
X-squared = 6.5, df = 3, p-value = 0.08966

```
